

Important Notice: Avian Influenza (Bird Flu) Case in the Bishop Burton Area

Attention Resident:

A confirmed case of Avian Influenza has occurred at premises in the area. The Government has declared:

3km radius Captive Bird (Monitoring) Controlled Zone.

The risk to public health from the virus is very low, however it is important that people don't pick up sick or dead birds.

APHA staff will contact known poultry/captive bird owners within the next few days to gather further information. This information will help veterinary staff to assess the risk of avian influenza spread. APHA veterinary staff may need to carry out an inspection of your birds to assess their health.

Please be reassured there is no automatic culling policy for avian influenza outbreaks. Birds will only be culled if Avian Influenza is confirmed following laboratory testing of samples, or if a veterinary risk assessment indicates a strong likelihood of significant links to an infected premise.

Compulsory registration of poultry and captive birds with APHA has been required since 1st October 2024.

If you keep poultry or captive birds and have not registered you must do so now using one of the following options:

Online Form: http://consultation.eastriding.gov.uk/s/WJIDNL/?survey_sort=ai

Phone: Call East Riding of Yorkshire Council at 01482 396301 Option 2 (Mon-Fri, 09:00 – 16:30).

Special Measures

If you have poultry or captive birds at your premises, you must adhere to the conditions and restrictions within the zone. Heightened biosecurity measures are required to be put in place to protect your birds from disease and prevent its spread. **All captive birds within the zone must be housed** and records kept of all poultry or poultry eggs that enter or leave your premises. Further information on the current avian influenza restrictions and controls which apply in the area can be found on the government website.

Signs of Avian Influenza

If your birds become ill, consult your vet immediately. Avian Influenza spreads through direct contact or contaminated fluids and faeces. Symptoms in poultry include:

- Swollen head and blue discolouration of the neck and throat
- Loss of appetite and diarrhoea
- Respiratory distress (gaping beak, coughing, sneezing, gurgling, rattling)
- Reduced egg production and increased mortality

By law, if you or your vet suspects that kept birds are showing any signs of disease it must be immediately reported to APHA by telephoning 03000 200 301.

Wild Birds

If the birds are wild, no action is required. However, you can assist by reporting dead wild waterfowl (swans, geese, ducks) or other wild birds (gulls, birds of prey) to the Defra helpline at 03459 335577.
